SUMMARY

AI/ML engineer and 2026 B.Tech (AI & ML) graduate who builds end-to-end Python systems, including LawGPT, a RAG legal assistant over Indian court judgments with Legal-BERT retrieval, a local LLM, and an outcome classifier trained on 10,200 labelled cases. Open-source contributor to ODS, a 6.9k-star local AI server. Five-month AI internship, mentored by Volkswagen engineers, building a PyTorch seq2seq chatbot and a 57K-song recommender on Django REST.

EDUCATION

B.Tech in Artificial Intelligence and Machine Learning, Anurag University, Hyderabad — CGPA 7.8 2022 – 2026

Class XII, Sri Chaitanya Junior College — 94% · **Class X (CBSE)**, Sri Chaitanya High School — 94% 2022 / 2020

OPEN SOURCE

ODS – Cross-Encoder Reranker Service (PR #1794, under review) Pull request

- Built a reranking service for ODS, an open-source local AI server (6.9k stars): a FastAPI endpoint serving a configurable cross-encoder, packaged as a Docker extension.
- Wrote 6 pytest tests with a mocked model (no model download needed) and a GitHub Actions workflow to run them on every PR.
- Resolved all 4 maintainer review points: model defaults, test mocking, CI integration, and error handling.

PROJECTS

LawGPT – Legal AI Assistant (RAG) GitHub

- Built a RAG legal research assistant over Indian Supreme Court and High Court judgments: Legal-BERT embeddings in ChromaDB, retrieval with duplicate cases removed, and answers grounded in the retrieved text and streamed from a local LLM (Ollama, phi3), in a three-module Streamlit app.
- Trained a Logistic Regression outcome classifier on 10,200 labelled judgments (Dismissed / Allowed / Partly Allowed) using Legal-BERT embeddings; returns confidence scores and similar precedents.

Blood Group Classification from Fingerprints (CNN + GNN) GitHub

- Built a hybrid model in PyTorch and PyTorch Geometric: EfficientNet-B3 feature maps converted to a 49-node k-NN graph and classified by a Graph Attention Network into 8 blood groups.
- 79.3% test accuracy on 1,600 held-out images across 8 classes, using test-time augmentation; served via Flask.

INTERNSHIPS

AI Developer Intern, Nivuna Labs May 2025 – September 2025

Mentored by engineers from Volkswagen

- Built a seq2seq chatbot in PyTorch (GRU encoder + Luong attention decoder), trained for 50K iterations on the Cornell Movie-Dialogs corpus; served via a FastAPI endpoint with a React chat UI.
- Built a lyrics-based music recommender over 57K songs (643 artists) using TF-IDF and cosine similarity, exposed through a Django REST Framework API and deployed on Render — GitHub

SKILLS, CERTIFICATIONS & ACTIVITIES

- **Languages & Fundamentals:** Python, JavaScript · Data Structures & Algorithms, OOP
- **AI / ML:** PyTorch, PyTorch Geometric, scikit-learn, Sentence-Transformers, CNNs, GNNs, seq2seq, RAG, ChromaDB, Ollama
- **Backend:** FastAPI, Django REST Framework, Flask, REST APIs
- **Frontend & Tools:** React, Vite, Streamlit, SQLite, Docker, pytest, GitHub Actions, Git, Render
- **Certifications:** ServiceNow Certified System Administrator (CSA) and Application Developer (CAD), Feb 2026
- **Activities:** Visionova national hackathon (built and pitched a full-stack app); Daksha Tech Fest marketing lead
